SAJIN S

Business Analyst | Software Engineer | Healthcare IT Systems
sajinsuri@gmail.com | +91 82176 06773 | LinkedIn | Portfolio | Bengaluru, India

PROFESSIONAL SUMMARY

Detail-oriented Software Engineer transitioning into a Business Analyst role, with hands-on experience across the full Software Development Life Cycle (SDLC) in healthcare IT systems. Skilled in requirement gathering, stakeholder management, functional and technical documentation, feasibility analysis, and process improvement. Proven track record of translating complex business problems into actionable technical requirements, coordinating cross-functional teams, and delivering enhancements to enterprise EHR and Hospital ERP platforms. Adept at leveraging AI-assisted and agentic development workflows — including vibe coding with Claude, GitHub Copilot, and prompt engineering — to accelerate delivery, automate repetitive tasks, and improve code quality. Strong communicator with a Master's degree in Computer Applications and a passion for bridging technology and business value.

CORE COMPETENCIES

- **Business Analysis:** Requirement Gathering, Functional & Technical Documentation, Feasibility Analysis, Gap Analysis, Change Management, Stakeholder Coordination.
- **Project & Delivery:** End-to-End SDLC Ownership, Agile Methodologies, Sprint Planning Support, Cross-Functional Collaboration, UAT Coordination.
- **AI & Emerging Technology:** AI-Assisted Development , Agentic AI Workflows, Prompt Engineering, GitHub Copilot, Claude (AI Pair-Programming), Workflow Automation.
- **Technical:** Java, Python, Angular, HTML5, JavaScript, CSS, Bootstrap, REST API Design & Development.
- **Database:** MongoDB, PostgreSQL, SQL.
- **DevOps & Tools:** Git, GitHub, Postman, Cypress, Jenkins (CI/CD Basics).

PROFESSIONAL EXPERIENCE

Software Engineer — dWise Healthcare IT Solutions Pvt. Ltd.

Aug 2024 – Present

Healthcare Enterprise Applications (EHR & Hospital ERP)

- Owned end-to-end delivery of features across the SDLC — requirement analysis, solution design, development, testing, deployment, and post-release support — for enterprise EHR and Hospital ERP modules.
- Partnered with Business Stakeholders, QA, and DevOps teams to translate business problems into clear functional and technical requirement documents, ensuring solutions were delivered on time and within scope.
- Designed, built, and optimized REST APIs across a Java backend and Angular front-end, supporting scalable data exchange between hospital systems.
- Led change management activities by validating implemented solutions against approved requirements, reducing scope deviation and rework.
- Applied AI-assisted development practices using GitHub Copilot and Claude — including AI-Assisted Development and agentic AI workflows — to accelerate feature prototyping, automate routine coding tasks, and improve development turnaround time.

Blood Bank Management System — Module Owner

- Independently led the maintenance and enhancement life-cycle of the Blood Bank Management System for a live client, acting as sole technical owner for the module.
- Engaged directly with end users and internal teams to capture business needs and convert them into implementable technical solutions.
- Maintained full traceability of change requests and ensured every implementation was validated and successfully deployed.
- Authored progress reports and status updates for internal stakeholders, maintaining transparency throughout the delivery cycle.
- Coordinated requirement gathering, validation, deployment support, and continuous improvement activities with cross-functional teams.

Audit Module — Individual Contributor

- Independently designed and implemented an audit trail feature across the entire application, capturing user activity, timestamps, and change history for every operation to strengthen data governance and compliance.

CSSD Module — Enhancement (In Progress)

- Currently enhancing the Central Sterile Services Department (CSSD) module, covering the sterilization and disinfection lifecycle of surgical and other instruments from issue through receipt back to CSSD for further processing.
- Delivering related inventory transaction tracking, ledger management, and stock balance reporting functionality.

EDUCATION

- **Master of Computer Applications (MCA)** — Presidency College | 2024
- **Bachelor of Computer Applications (BCA)** — AIMS Institute | 2022

CERTIFICATIONS

- The Bits and Bytes of Computer Networking — **Coursera**
- SQL Course — **SoloLearn**
- Data Science 101 — **IBM**
- Google Analytics for Beginners — **Google**
- Web Development (HTML, CSS, JavaScript) — **Digital Ada**
- Microsoft Power BI for Business Intelligence — **Udemy** (In Progress)

ACADEMIC PROJECTS

- **Online Auction System** (Python, Django, SQLite, Tailwind CSS) — Implemented CRUD APIs and secure user authentication; deployed on a local server.
- **Car Rentals System** (PHP, MySQL, HTML, CSS) — Built a dynamic booking web application with an automated billing system.
- **Shop Management System** (VB.NET, MySQL) — Automated inventory tracking and billing with integrated reporting features.

AI-DRIVEN DEVELOPMENT PRACTICES

- Used GitHub Copilot and Claude as AI pair-programming tools throughout the development process to speed up prototyping, generate boilerplate code, and refactor existing modules with minimal manual overhead.
- Practiced 'vibe coding' with Claude — rapid, conversational, AI-assisted development for quick proof-of-concepts and iterative feature building.
- Applied prompt engineering techniques to guide GitHub Copilot and Claude for code generation, documentation drafting, test-case creation, and requirement summarization.

DECLARATION

I hereby declare that the details mentioned above are true and accurate to the best of my knowledge.
